

Core Pages Needed for getmecare.ca

Please design structured pages needed to handle traffic, boost local SEO, and manage the platform's logistics as outlined below:

1. The Search & Browse Directory PAGE

Purpose: The core marketplace engine where families filter and view caregiver profiles.

Features: Filters for City, Services Needed, Languages, hourly rates, and "Verified" status.

SEO Value: Dynamic profile pages (e.g., getmecare.ca/caregivers/sarah-psw-toronto) create indexable pages that pull long-tail search traffic from Google.

2. City-Specific Landing PAGES (Crucial for Local SEO)

Purpose: Separate pages explicitly designed to rank for specific regional searches.

The Pages to Build:

getmecare.ca/elderly-care-toronto

getmecare.ca/psw-caregivers-ottawa

getmecare.ca/companions-mississauga

The Content Structure: Copy similar to the homepage, but heavily tailored to each specific city, should highlight local availability and localized trust signals.

3. PSW/Caregiver Onboarding & Signup Page

Purpose: To recruit and register the supply side of your marketplace.

Features: Secure document upload portals for their Ontario College PSW Certificates, photo IDs, CPR certifications, and digital copies of their Vulnerable Sector Checks (VSC).

4. "Trust, Safety & Vetting" Informational Page

Purpose: A dedicated page explaining your exact screening process.

Why it matters: Canadian families will naturally wonder how a virtual platform ensures safety. This page details your verification steps, payment security via Stripe, and community guidelines to remove friction and build trust.

5. Legal Pages (Terms of Service & Privacy Policy)

Purpose: Liability protection.

Key Content: Your Terms of Service must clearly state that **GetMeCare** is not an employer, does not provide medical services directly, and is not responsible for worker-client disputes, explicitly reinforcing the independent contractor relationship.
